All operations can be performed by both sides, but for simplicity are only displayed originating from the left.

Endpoint ←— Internet: QUIC —→ STUN / TURN Server ←— Internet: QUIC —→ Endpoint

Performing Address Discovery using QUIC, not implemented?

Receiving information: can I respond?

QUIC carrying address information —→ Path Probing ←— QUIC carrying address information

QUIC carrying address information

Hey, I can reach you?

Path Migration / Validation is done by QUIC itself... Only need to trigger / check & verify this
